

FastStor

For a week or more of hands-free backup.

Both the FastStor LTO and DLT autoloaders provide the capacity and performance levels needed to support a week or more of unattended backup -- even for high data growth environments and the next generation of high-performance servers.

Using FastStor autoloaders instead of standalone tape drives eliminates daily tape loading, reduces the time spent on backup and recovery, and increases data security.

FastStor is easy to install, and its clear menu system makes operation easy too. The system offers industry-leading density. One or two units mount in only 8.75 vertical inches (5 units) of standard rack space or fit easily atop a server.

Features and Benefits

- Seven-tape capacity means a week or more of unattended backup and automated file recovery
- Easy to operate—dedicated backup administrator is not required
- Small size—fits into the same space as a standalone drive
- Dynamic slot sensors mean real-time tape detection that eliminates slow tape re-inventories
- Barcode reader option delivers instant media verification and inventory
- Three-year FastExchange™ warranty means a replacement unit is shipped the next business day
