

Magnum 6x60 Tape Library

Enterprise capability with midrange affordability

- 60 cartridges (up to 24TB capacity*)
- 1 - 6 LTO drives
 - from 54 GB/hr. to 1.5TB per hour
- "4 libraries in 1"
 - with unique partitioning feature
- Industry-leading density
 - occupies just 20u of rack space
- SCSI and native Fibre Channel interfaces
 - supports simultaneous combination of interfaces
- Support for LTO-1 and LTO-2 tape drives
 - multiple generation simultaneous combination is supported

About the Magnum 6x60 Tape Library

If you want the ultimate in scalability then the award-winning Magnum 6x60 tape library is for you. Magnum 6x60 easily expands from a 2 drive, 20 slot library to a 6 drive, 60 slot library for the same low price. With the industry's best combination of capacity, manageability and density, Magnum 6x60 will support your storage needs for today and provide for future data storage growth. Offering up to 24TB of capacity in just 20u of rack space, Magnum 6x60 provides over 1TB per rack unit, offering enterprise-class capability at midrange affordability.

Flexibility is a key feature of the Magnum 6x60 LTO Library. It can easily expand from a 6 drive, 60 slot library into a powerful 8 drive, 143 slot library with a simple firmware upgrade. Magnum 6x60 accommodates changing storage needs without requiring re-configuration of your rack, adding storage columns or additional library modules. Magnum 6x60 comes standard with partitioning capability, allowing users to create as many as four SCSI "virtual libraries" or up to 6 native Fibre Channel "virtual libraries" within a single Magnum 6x60, for the ultimate in flexibility and efficiency. Support for LTO-1, LTO-2, LVD SCSI and native Fibre Channel drives all within the same library unit, all at the same time, is also a standard feature; further increasing your Return on Investment and providing for the ultimate in scalability.

Field installable interface cards enable users to mix multiple interfaces (SCSI and Fibre Channel) for flexible connectivity options. Remote management is a standard feature on all Magnum 6x60 libraries, providing users with the ability to manage their data storage either directly from the library's front panel display, or from a remote location via a Web interface connection. Native Fibre Channel capability results in optimized performance for SAN applications without the cost, performance and reliability issues associated with other routed Fibre Channel implementations.
